### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Eugene Perez (Reg. No. 48,501) on 20 January 2006.

The application has been amended as follows:

In the specification at page 14, line 23, and at page 26, line 5, replace "article" with --core--.

### ***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance:

The art of record fails to teach or suggest the combination of a diaper with a topsheet, backsheet and absorbent core, the diaper further having leg openings, each leg opening having a first front elastic member that forms an arc along the leg opening, each leg opening having a second back elastic member that forms an arc along the leg opening, the first and second elastic members being separated from each other in the crotch area of the diaper, when the diaper is worn, the opposite transverse sides of the diaper in the crotch region include absorbent material that bends towards an external surface (opposite from body side) to form leg flap absorbent articles. The previously cited references to Hayase *et al.* and Sasaki *et al.* teach outwardly bending flaps at the side of the crotch portion, but these flaps contain no absorbent material.

Roessler *et al.* (US 5,540,672 A) teach front and rear arced elastic members in the leg openings which do not come in contact with each other and are thus isolated. However, the reference fails to teach opposite side edges in the transverse or width direction of the crotch portion that bend toward an outside or external surface of the article, the side edges forming leg flaps form **absorbent members** which can contact the inner thigh of a wearer. The side edges of the crotch portion of Roessler *et al.* do not contain absorbent material. See also, Sauer (US 5,957,907 A). Gustafsson *et al.* (US 5,779,690 A) teach such side absorbent members but they do not teach front and rear leg opening elastic members which are isolated from each other.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
